

OUTSMART THE SWELTER

5 SIMPLE WAYS TO WORK SMART IN THE HEAT

KNOW THE SIGNS // EASE INTO IT // KEEP ON CHUGGIN' // BREAK IT UP // FIND YOUR CHILL

Carelessness, machismo and misinformation are at the center of thousands of heat-related injuries every year even though they're absolutely, positively, 100% preventable with just a little planning and brainpower.

1 KNOW THE SIGNS

HEAT-RELATED ILLNESS

Any of these sound familiar? Find a shady spot + cool drink ASAP. Be on the lookout for co-workers experiencing any of these, too.

2 EASE INTO IT

HEAT ACCLIMATIZATION

Ask your employer about acclimatization protocol (aka "easin' into it") if you're new, been off work for a while, or there's been an extreme shift in temp.

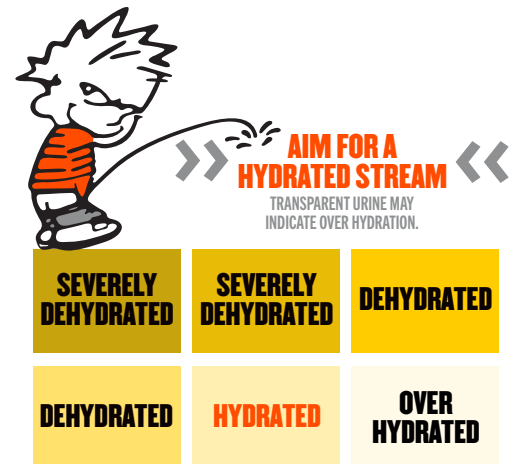

70% of heat-related illnesses occur within the first few days of extreme heat.

3 KEEP ON CHUGGIN'

HYDRATION

OSHA recommends workers gradually replace lost fluids with 5-7oz of water every 20 minutes. Urine color is your number one (Ha! See what we did there?) indicator of hydration levels.

4 BREAK IT UP

WORK-TO-REST RATIO

Setting the right working hours and breaks schedules for workers in the heat is critical. A supervisor on your staff should be actively enforcing these break times, and ensuring the break area provides shade and easy access to water.

5 FIND YOUR CHILL

BODY COOLING PPE

Along with the biggies of water, rest and shade, experts recommend cooling PPE (vests, towels, shirts, headbands etc) as a simple way to maintain safe body and skin temps throughout the shift.
